

BAND-IT®

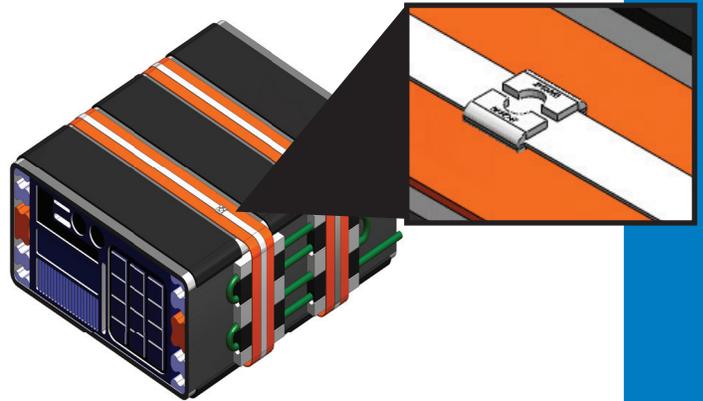

Battery Packaging

Consistent and verifiable way to package and reinforce battery packs

Stainless steel clamps have been successfully used in many automotive applications like exhaust shielding, tire pressure monitoring systems and side curtain airbag installations with many of the same challenges as battery packaging.

Why Use Stainless Steel Clamps

- Conforms to any shape and size
- Used with various types of metals
- Stronger and lasts longer than welding, adhesives or mechanical fasteners

Industrial Tool Series (IT6000)

This hand held tool option offers extreme manufacturing flexibility for battery banding applications. The industrial tool series is optimal for bundling small to medium sized modules.

ULTRA-LOK® 4000-B

A Lithium-ion battery operated hand held tool option which offers manufacturing flexibility for battery banding applications. The ULTRA-LOK® tool is optimal for medium to large sized modules.

Intelligent Clamping System

This portable machine offers advanced data feedback that allows you to effectively monitor your manufacturing process.
